**PROJECT DESCRIPTION AND LOCATION:** The recommended Alternative 4 involves expansion of the Tillman Water Reclamation Plant (TWRP) to 100 mgd and upgrading its treatment processes to advance treatment, in addition to adding wastewater and recycled water storage at the Los Angeles Glendale Water Reclamation Plant (LAG). Alternative 4 would reuse up to 56,100 acre-feet per year of recycled water, as well as manage 42 percent of the dry weather and 47 percent of the wet weather urban runoff generated in the City. The project also includes construction of the Glendale-Burbank Interceptor Sewer (GBIS) comprised of approximately 5 ¾ miles of 8-foot diameter interceptor sewer and associated structures that would provide sewer relief of the North Outfall Sewer (NOS) from the vicinity of Griffith Park (LA Zoo) to the vicinity of Toluca Lake. The project also includes the Northeast Interceptor Sewer Phase II comprised of approximately 5 ½ miles of 8-foot diameter interceptor and associated structures from the vicinity of Glassell Park to a point north of LAG. At a concept, the project discusses the Valley Spring Lane Interceptor Sewer (VSLIS) comprised of approximately 8 ½ mile interceptor and associated structures that would extend from the Toluca Lake area, northwest to TWRP. VSLIS was evaluated at a program-level in the EIR and would require further study/analysis in the future.
