

TOPGRO™ - L.A.'s Own Compost

The yard trimmings collected from your green containers and the manure collected from brown containers are combined to produce TOPGRO™ Premium Soil Amendment, a high quality compost. It helps improve your soil, conserve water and promote healthier, greener plants. When you recycle yard trimmings in your green bin and then use TOPGRO™ products on your lawn, flower garden, and vegetable garden, you close the recycling loop and become a full-cycle recycler.
